

## **Don Goldstein Named to PacketSled's Board of Advisors**

*Former SVP & CISO at CBRE, the world's largest commercial real estate investment firm, brings extensive cyber security leadership experience*

**Santa Barbara, Calif.**, January 17, 2019 – FOR IMMEDIATE RELEASE -- [PacketSled](#), the leading AI-driven Network Monitoring and Forensics platform, today announced that Don Goldstein has joined PacketSled's Board of Advisors.

"Don's deep experience in the enterprise cybersecurity space will be invaluable to PacketSled as we evolve our model to focus on AI-driven solutions that solve real enterprise business problems," said John Keister, CEO of PacketSled. "Don has already provided great feedback on our product strategy and we look forward to his partnership as we drive growth in 2019."

Don is currently CEO of 5Q Cyber LLC, a cyber security advisory and managed security services firm serving the commercial real estate industry. Don has over 35 years experience in IT management as CIO and security risk management, most recently as CISO at CBRE, the world's largest commercial real estate services and facilities operator. Prior to his nearly 20 years at CBRE, Don held IT leadership positions in the property casualty insurance industry. He has overseen M&A IT due diligence and integration work for CBRE, including several billion-dollar deals. Don has also served as an advisor to Realcomm, the largest commercial real estate technology forum. He was co-Chair of the 2012 Realcomm Conference and helped Realcomm launch the CoRETech (Corporate Real Estate) and Cybersecurity forums. He received Realcomm's prestigious Lifetime Achievement Award in 2018 for his 20 years in the Commercial and Corporate Real Estate Industry.

Don holds degrees from Johns Hopkins University, Columbia University, and Loyola University Maryland. He also graduated from Carnegie Mellon University's CISO Executive Education and Certification Program.

"PacketSled's AI initiatives, led by their CTO, Dr. Igor Mezic, are breaking new ground in the cybersecurity space," said Goldstein. "I am looking forward to supporting their efforts to build the right strategy and relationships to foster further acceleration in their business."

### **About PacketSled**

PacketSled is an AI-driven network monitoring and forensics platform of choice for security teams globally. Used by enterprises and MSSPs for real-time network analysis, threat hunting and incident response, the platform leverages continuous stream monitoring and retrospection to provide network forensics and security analytics. Security teams can integrate PacketSled into their orchestration engine, SIEM, or use PacketSled independently to dramatically reduce the resources required to respond to persistent threats, malware, insider attacks, and nation state espionage efforts.

The company has been named an innovator in leading publications and by security analysts, including SC Magazine, earning a finalist award in 2018 and 2019 for "Best Computer Forensic Solution." Based in Santa Barbara and San Diego, the company is backed by investors including Keshif Ventures and Blu Venture Investors.
