Go Beyond Storage with MixMode

Security Information and Event Management (SIEM) solutions have been the go-to compliance approach for organizations to collect, analyze, and manage security events and logs. However, SIEM solutions often need help keeping pace with the rapidly evolving threat landscape and the complexity of today's modern cyber-attacks.

SIEMs lack advanced threat detection capabilities, leaving organizations vulnerable to sophisticated threats that evade traditional signature-based detection methods. The size and complexity of big data have also made most SIEMs incapable of effectively collecting, analyzing, and correlating data from multiple sources. These limitations hinder timely incident response, increase the risk of undetected breaches, and weaken overall security effectiveness.

Detect and Remediate Threats in Real-time

The MixMode Platform helps enhance a SIEM's capabilities by ingesting and analyzing large volumes of data in real-time, automating the threat detection process to immediately surface relevant threats, and avoiding the typical preponderance of rules-based false positives. This enables analysts to do more with less, and save time by focusing on the threats that matter.

The MixMode Platform helps strengthen existing investments, maximizing ROI and delivering long-term value. By leveraging advanced detection capabilities alongside a SIEM, organizations can strengthen their cybersecurity posture, enhance threat detection and response capabilities, and stay ahead of rapidly evolving cyber threats.

NO RULES. NO TUNING. NO DATA LIMITS. ANY ENVIRONMENT.

Advanced Threat Detection at Scale:

Strengthen Defenses: Real-time and predictive dynamic threat detection and response for novel and known attacks at scale for cloud, on-prem or hybrid environments.

Avoid Blindspots: Easily monitor large volumes of data in real-time to quickly detect and mitigate threats without increasing storage or spend.

Detect ALL Attacks: Detects and prevents threats that bypass traditional security measures, including New Ransomware, Zero-Day, Insider Threats, "Living off the Land", Supply Chain, AI/ML Model Poisoning.

Reduce Costs: Reduce storage costs and eliminate the need for multiple disparate toolsets while up-leveling existing investments.

Increase Efficiencies: Make informed decisions and save time by focusing on the threats that matter and avoiding false positives that don't.
